

Wildrock Stewards (Grades 1-4)

Students will hike the Discovery Loop trail through forest, meadow, and stream and along the way, learn how people can help the environment by creating improved habitat for animals! Students will create insect hotels that may be taken back to school to improve schoolyard habitat for insects. Students will also do a simple stream assessment by looking for what benthic macroinvertebrates are living in the stream.

This trip may include free play on Wildrock's Nature Playscape.
